PERSONAL

Portfolio Site - *bryanzack.com*

Using the React.js framework, I built a simple portfolio site to showcase some of my capabilities. The site makes use of fundamental React.js concepts such as components, props, and state.

- Software: WebStorm, Firefox, React.js
- Languages: Javascript, HTML, CSS, JSX

Match History Display Site - *bryanzack.com/league*

This project makes use of React.js for the frontend, and Express.js as the backend. The purpose of this site is to let the user see a summary of their last 10 games of League of Legends given a username and region code. Input data from React.js is sent to and processed by Express.js by query parameters, which in turn is then used to gather additional match data from League of Legends official API.

Software: React.js, Express.js, WebStorm

- Languages: Javascript, HTML, CSS, JSX
